

Bookkaru Cancel Seat API Documentation

Method: **POST**

Endpoint URL:

<https://api.kainattravels.net/api/bookkaru/cancel-seat>

Request Body JSON

```
{
  "request_id": "api-test-3",
  "invoice_id": 865127,
  "transaction_id": "123456789",
  "seat_numbers": [
    "6 up"
  ],
  "cancellation_reason": "Cancelled from Bookkaru API",
  "deduction_percentage": 25,
  "source": "Bookkaru"
}
```

Field Details

request_id	string, required, unique request ID from Bookkaru
invoice_id	integer, required, Kainat invoice ID
transaction_id	string, required, Kainat ticket transaction ID. Legacy booking_reference is temporarily accepted as an alias.
seat_numbers	array, required, seat numbers to cancel
cancellation_reason	string, required, reason for cancellation
deduction_percentage	numeric, optional, 0 to 100. Legacy refund_percentage is temporarily accepted as deduction percentage. If omitted, backend default BOOKKARU_DEDUCTION_PERCENTAGE is used.
source	string, required, request source, example Bookkaru

Initial Success Response

```
{
  "status": "success",
  "message": "Cancellation request received and is pending approval.",
  "data": {
    "request_id": "api-test-4",
    "invoice_id": 866245,
    "transaction_id": "123456789",
    "seat_numbers": [
      "6 up"
    ]
  }
}
```

```
    ],
    "deduction_percentage": 25,
    "refund_percentage": 75,
    "approval_status": "pending",
    "cancellation_status": "pending",
    "source": "Bookkaru"
  },
  "error": null
}
```

After Approval Success Response

```
{
  "status": "success",
  "message": "Seat cancellation successful.",
  "data": {
    "request_id": "api-test-4",
    "invoice_id": 866245,

      "The seat numbers field is required."
    ]
  }
}
```

```
    ],
    "cancellation_reason": [
        "The cancellation reason field is required."
    ],
    "source": [
        "The source field is required."
    ]
}
}
```

Important Notes

- Cancellation request will be created as pending approval first.
- Actual seat cancellation will happen after approval.
- Refund formula: $\text{deduction_amount} = \text{seat_fare} * \text{deduction_percentage} / 100$;
 $\text{refund_percentage} = 100 - \text{deduction_percentage}$; $\text{refund_amount} = \text{seat_fare} * \text{refund_percentage} / 100$.
- deduction_percentage is optional. If it is not provided, backend default BOOKKARU_DEDUCTION_PERCENTAGE will be used.
- Duplicate request_id values do not process cancellation or refund again.
- Use transaction_id and deduction_percentage for all new integrations. booking_reference and refund_percentage are temporary legacy aliases.
